

# Interaction and Perception

---

# Taxonomy of Infoviz Tasks

---

- Overview: See overall patterns, trends
- Zoom: See subset
- Filter: See subset based on attributes
- Details on demand: See more about specific object
- Relate: See relationships, compare values
- History: Keep track of actions and insights
- Extract: Mark and capture specific data

# Visual Information Seeking Mantra

---

**Overview first,  
zoom and filter,  
details on demand.**

—Ben Shneiderman

# Three Types of Feedback Loops

---

- Data selection and manipulation
  - Most important for interactive visualization
- Exploration and navigation
- Problem solving

# Reaction times

# Simple Reaction Times

---

Optimal (finger at the ready)

- ~130 ms (Kohlberg, 1971)

Infrequent (still at the ready)

- Up to 700 ms (Warrick et al., 1964)

# Choice Reaction Times

---

Hick-Hyman law:

$$\text{Reaction Time} = a + b \log_2(C)$$

Where  $C$  = number of choices,  
and  $a$  and  $b$  are constants.

$\log_2(C)$  is information processed  
by humans in bits.

# Choice Reaction Times

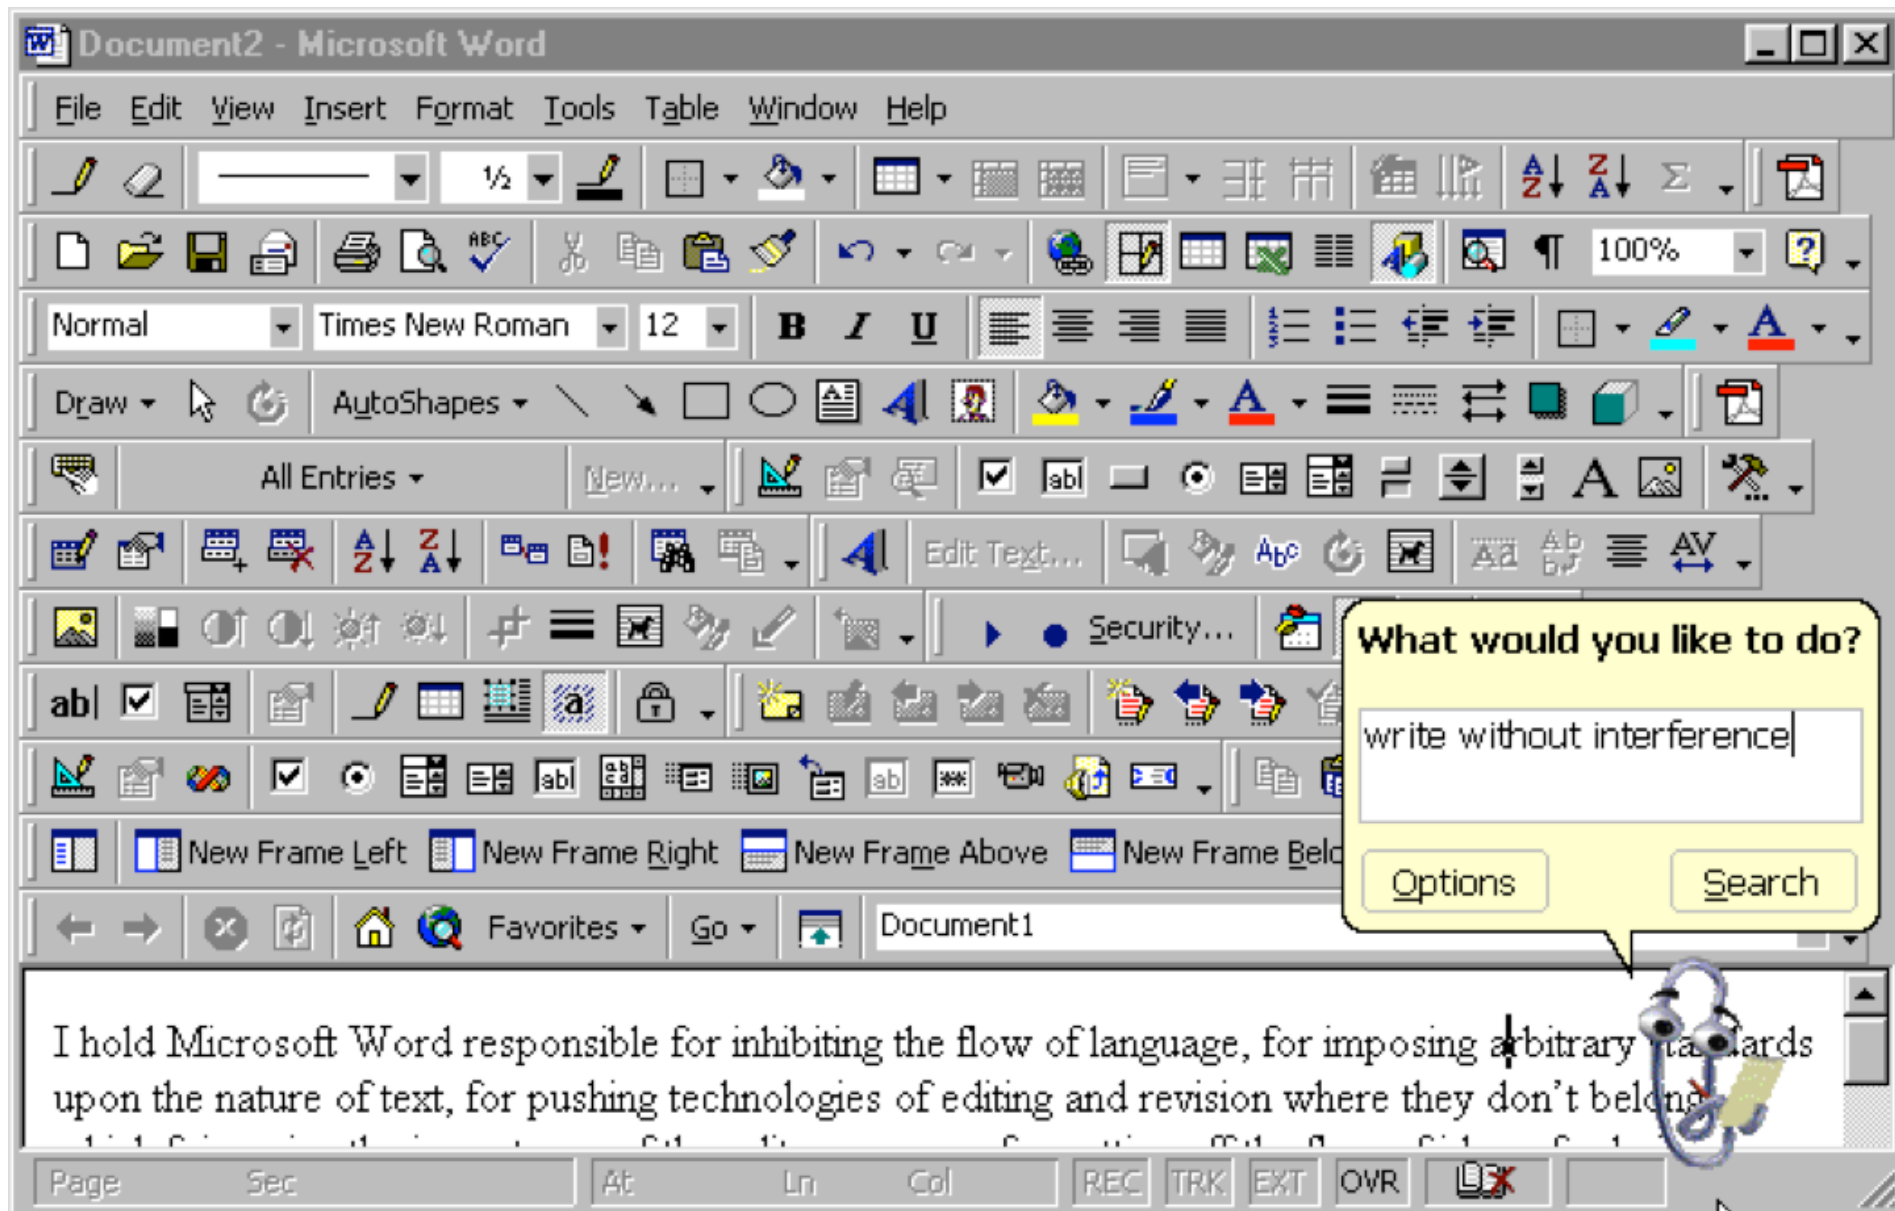

---

Hick-Hyman law:

Dealing with choice is expensive

# Minimize visual noise

# System Response Times

# Three Thresholds

---

- 0.1 s for visual continuity, feels like real time:  
animations, sliders
- 1 s for reasonable system response:  
pause in conversation
- 10 s for process expected to be slow:  
cognitive response  
threshold for suspecting system is broken

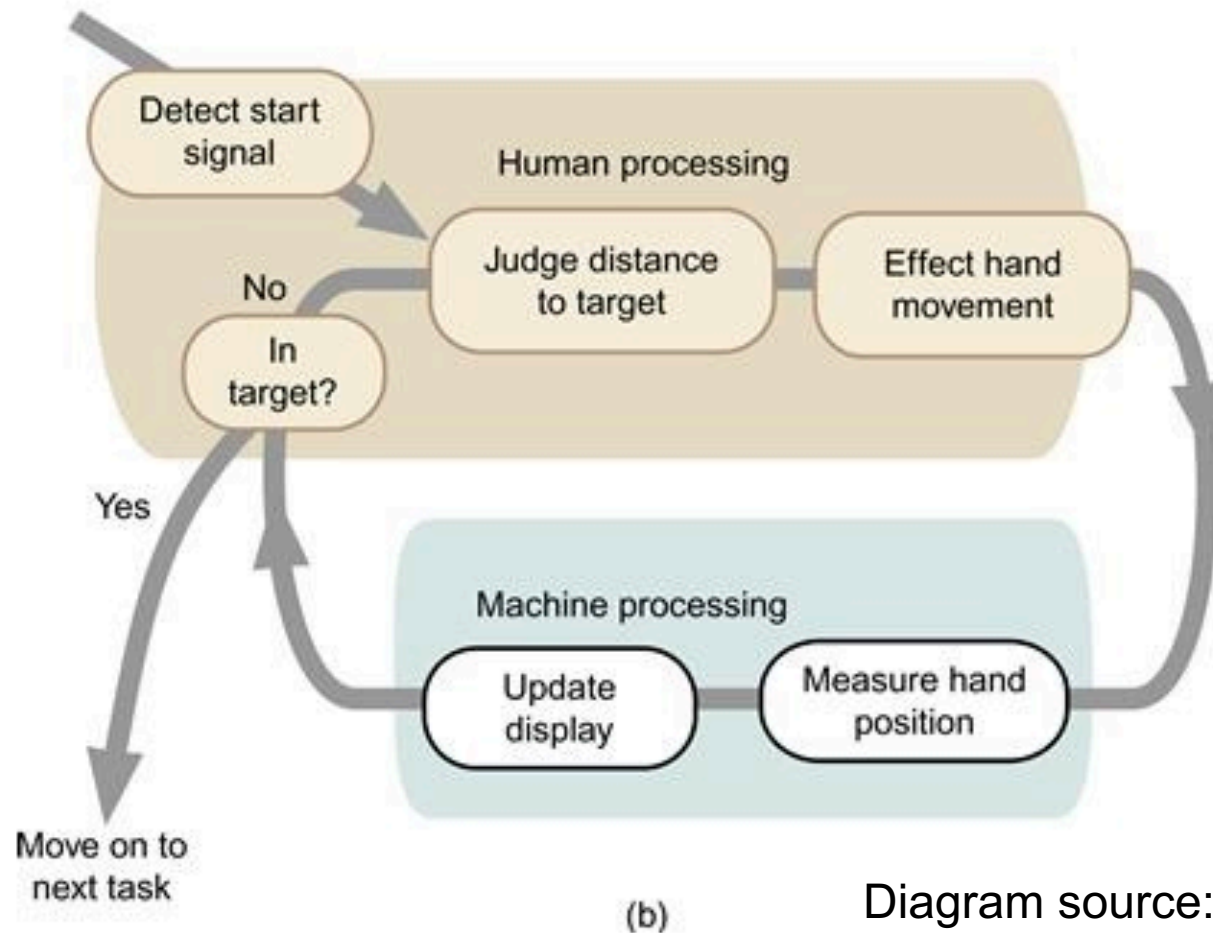

Diagram source: Ware, 2010

# Fitts's Law

---

$$\text{Selection time} = a + b \log_2(D/W + 1)$$

- $D$  = distance to target
- $W$  = width of target
- $\log_2(D/W + 1)$  is index of difficulty (in bits)
- $1/b$  = index of performance (in bits/s),  
roughly constant, typically  $\sim 4$

# Fitts's Law

---

- Time increases as distance to target increases
- Time increases as width of target gets smaller

# Fitts's Law

---

- Keep controls that you want users to easily move between near each other.
- Make click targets large.
- Keep controls that users should use rarely away from commonly used controls.

# Fitts's Law
